IN THE CLAIMS

Please replace all prior claims in the present application with the following claims, in which claims 1-16 have been canceled, and claim 17 is currently amended.

1-16. (Canceled).

A/ 17. (Currently Amended) A method of permitting customized end-user interaction with a call service in an intelligent network, comprising:
collecting user input information needed to establish the call service; (Fig 2A, 100)
providing the collected user inputs to a service control point associated with the call service; and (Fig 2A, 150)
outputting information through a standardized interface between the service control point and an intelligent peripheral, wherein the information is associated with the call service in a manner customized with respect to a given user through a set of configurable parameters at said intelligent peripheral unit thereby enabling play out of output information in different formats dependent on a given user. C.9, 7-40

18. (Original) The method according to claim 17, wherein collecting user input information comprises collecting one or more of DTMF tones, analog pulses, and verbalized speech.

19. (Original) The method according to claim 17, wherein outputting information comprises outputting at least one of a recorded message and spontaneously-generated speech.

20. (Original) The method according to claim 19, wherein outputting spontaneously-generated speech comprises concatenating a string of recorded speech segments.
